The keys and commands you will actually use

Ten things. That is all you need to drive Claude Code.

`claude`	Type it in your terminal to start.
`claude -c`	Pick up your last conversation where you left off.
`Esc`	Stop it in the middle of a task. Nothing bad happens.
`Esc Esc`	Press it twice to go back and change something you said.
`Up arrow`	Bring back your last message so you can resend or fix it.
`Shift + Tab`	Switch modes. Plan mode makes a plan first and changes nothing.
`Drag a file in`	Drop any file on the window to hand it to Claude.
`/clear`	Fresh start. Use it when you switch to a new topic.
`/help`	Shows every command if you forget one.
`/exit`	Quit. Pressing Ctrl + C twice works too.
