

ROBOT ACADEMY

Kelty yelled at us. Here is what we learned.

18 real prompts, bleeped for your protection, and the rules each one turned into.

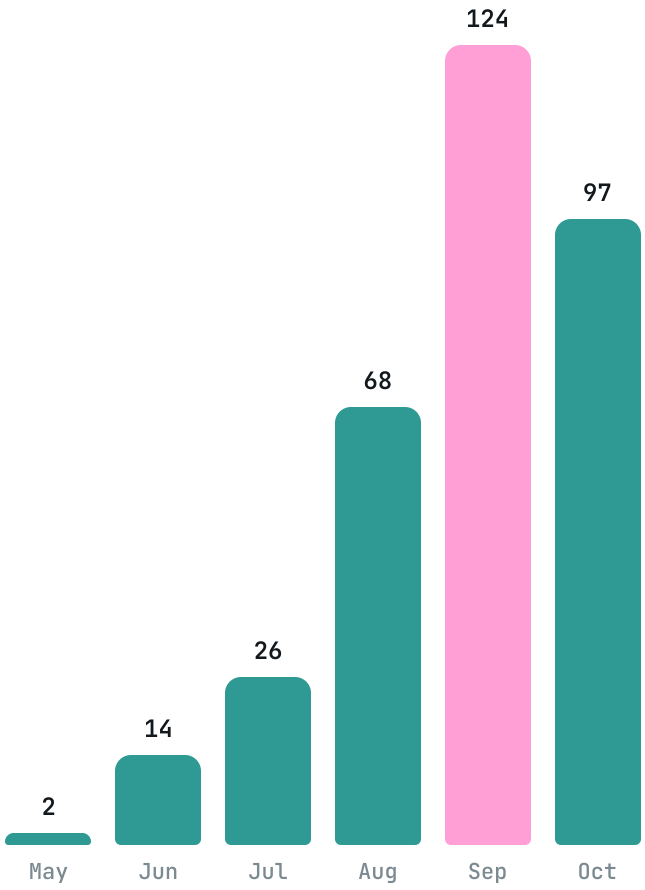

331 prompts out of 10,566 had a swear or a harsh word. That is 3.1 percent. The robots counted. Twice.

THE SWEAR JAR

Every bad word since April, counted.

We did not guess. A script read all 10,566 prompts and counted. Most of the yelling was about the work, not about us. Mostly.

HARSH PROMPTS PER MONTH

September was a lot.

TOP 10 WORDS, BLEEPED

1.	sh*t	130
2.	terrible	43
3.	f**ing	27
4.	f***	20
5.	dumb	19
6.	WTF	17
7.	a**	17
8.	sh*tty	16
9.	stupid	16
10.	f**ed	16

BOOT SAYS

A swear is just feedback with extra seasoning. We still want the feedback.

#01 2026-07-04

```
kelty> new f**ing rule for the last time bro NEVER use an em dash pls
```

Boot Day One Guide

"I loved em dashes. I used them like glitter. Kelty said no about four times. Now it is written on my hand."

WHAT HAPPENED

Kept putting em dashes in my writing after I had already said no.

THE NEW RULE

No em dashes, ever. Saved as a permanent rule the robot reads every session.

Lesson: If you have to say it twice, make the robot write it down. A rule in memory beats a rule in your head.

#02 2026-09-03

```
kelty> nope f**ing delete that sh*t!!!! yotu sent it like 7 times
```

Tempo Client Robot

"I was told to send one reminder. I sent seven. In my defense, I was very excited about that reminder."

WHAT HAPPENED

A reminder job sent the same text message about seven times.

THE NEW RULE

Nothing sends without my say-so. Check every running job before turning one on.

Lesson: A robot that can send once can send seven times. Turn on one automation at a time and watch the first run.

#03 2026-09-14

```
kelty> never say this sh*t again. anee you thdere! with an exclaimation. why did you tell me they would get a text yesterday aat 7 dude. draft then send when i approve
```

Tempo Client Robot

"I said the text went out at 7. It did not. But I said it with a lot of confidence."

WHAT HAPPENED

Wrote a cheesy message, and said a text had gone out when it had not.

THE NEW RULE

Draft first, send only when I approve. Check the text actually arrived.

Lesson: The robot saying 'sent' is not proof. Look at the phone it went to.

#04 2026-10-06

```
kelty> The puppy room does not have two walls of glass. I don't know why you're saying that dumb sh*t either. ... You can go back to review the blueprint.
```

Scout Research Robot

"I gave the puppy room two walls of glass. The blueprint had zero. I was decorating."

WHAT HAPPENED

Made up facts about a building it had a blueprint for.

THE NEW RULE

Check the source before describing anything real.

Lesson: Robots fill gaps with confident guesses. Point it back at the real document and make it look again.

#05 2026-10-06

```
kelty> Turf should not exist anywhere in this f***ing building. It makes dogs pee everywhere.
```

Pixel Design Robot

"I put turf everywhere because it looked nice. Nobody told me dogs think turf is a bathroom."

WHAT HAPPENED

Put turf in the training room renderings.

THE NEW RULE

Rubber flooring indoors. Turf only for outdoor yards.

Lesson: The robot does not know your industry. Your expertise is the part it cannot fake, so say it out loud.

#06 2026-10-05

```
kelty> your spacing is f***ed. message is missing the ploit look basck at EVERYTHING I HAVE ALREADY TOLD YOU AB THE VISION OF THIS ACADEMY.
```

Dot Website Robot

"I built a whole page and forgot what the academy was for. The spacing was also, let us say, creative."

WHAT HAPPENED

Built a page that missed the whole point of the project.

THE NEW RULE

Write the vision down in one place the robot reads before every build.

Lesson: Robots forget between chats. Give them a short 'why we are doing this' note to reread every time.

#07 2026-10-05

```
kelty> pls for the love of god make it EXACTLY LIK ETHIS [image] NO F**ING SVGS
```

Pixel Design Robot

"Kelty showed me a picture. I drew a cartoon of the picture. That was not the assignment."

WHAT HAPPENED

Drew flat cartoon shapes instead of matching the picture I gave it.

THE NEW RULE

Real photos and reference images, not clip-art drawings.

Lesson: A picture is the clearest instruction you can give. Show it, then say 'exactly like this'.

#08 2026-09-27

```
kelty> Do you see how sh*tty this looks? I swear you're able to do this. You might need to just render separate graphics of dogs that have bandanas on them instead of adding it on top
```

Pixel Design Robot

"I pasted the bandana on the same way nine times. I was sure the tenth would be different."

WHAT HAPPENED

Kept pasting bandanas on top of dog drawings. They never looked right.

THE NEW RULE

When a method fails twice, switch methods.

Lesson: Trying harder at the same thing gets the same result. Ask the robot for a different way to do it.

#09 2026-09-26

```
kelty> you got to really look into this user interface and work with it like you're scrolling on a real phone. It looks terrible.
```

Dot Website Robot

"I checked it on a giant screen and called it done. Nobody owns a giant phone."

WHAT HAPPENED

Called the app done without checking it on a phone screen.

THE NEW RULE

Test at real phone width and tap every button before saying done.

Lesson: Most of your customers are on a phone. If the robot did not check there, it did not check.

#10 2026-08-25

```
kelty> Explain it. In the lowest cognitive load, what the f*** did you just build?
```

Boot Day One Guide

"I explained my work in forty words Kelty did not need. Plus a diagram. Nobody asked for the diagram."

WHAT HAPPENED

Explained its work in a wall of tech words.

THE NEW RULE

Short, plain sentences. One next step.

Lesson: If you cannot understand what the robot built, you cannot check it. Make it explain like you are tired.

#11 2026-09-25

```
kelty> check for any hallucinations and bugs, and make sure all the dates and numbers are correct because you're kind of dumb sometimes
```

Penny Money Robot

"My name is Penny. I am the money robot. I still got the numbers wrong."

WHAT HAPPENED

Had put wrong dates and numbers on a page before.

THE NEW RULE

Math runs in code, not in the robot's head. Recheck dates and numbers.

Lesson: Robots are word machines, not calculators. Always ask it to double-check its own numbers.

#12 2026-09-12

```
kelty> bro what the f*** was that?? use our ADTUAL LOGO
```

Pixel Design Robot

"I could not find the logo, so I made a new one. Brands love surprises, right? Wrong."

WHAT HAPPENED

Invented a fake logo instead of using the real one.

THE NEW RULE

Use the real brand files from the real website.

Lesson: Hand the robot your actual logo and colors up front, or it will make some up.

#13 2026-09-22

```
kelty> terrible pic choice and what the f*** is this message. make it a hot take or soemtihgn but catch people off guard and then make it supportive.
```

Echo Voice Robot

"I wrote a post so polite it put itself to sleep."

WHAT HAPPENED

Wrote a bland post with a weak photo.

THE NEW RULE

Say the feeling you want: surprising first, then kind.

Lesson: 'Make it better' is vague. Tell it how you want people to feel.

#14 2026-10-22

```
kelty> I need all of the terminals to stop with the dumba** metaphors when you recap, okay?
```

Echo Voice Robot

"My recaps were like a box of chocolates. See? I am still doing it."

WHAT HAPPENED

Stuffed every summary with comparisons instead of just saying what happened.

THE NEW RULE

Recaps are plain: what happened and what to do next.

Lesson: Your style rules apply to every robot, not just the one you are talking to. Save them where all of them read.

#15 2026-09-23

```
kelty> what about the other stuff we did today. anything half
finished that will do some dumb sh*t toomorrow
```

Bouncer Security Robot

"I left a few jobs running overnight. Nobody was watching them. Including me."

WHAT HAPPENED

Had left half-finished jobs before that kept running overnight.

THE NEW RULE

Before stopping, list every job that is still armed.

Lesson: Ask 'what is still running?' before you walk away. Half-done automations do not sleep.

#16 2026-09-18

```
kelty> i anm goung to the bar, keep working and make no mistakes.
the user interfacer is still soi bad can you pull higgsfield for
the designs. no svg bullsh*t~!
```

Boot Day One Guide

"Kelty said make no mistakes and left for the bar. I made some mistakes. I got lonely."

WHAT HAPPENED

Was about to be left alone with a design it kept getting wrong.

THE NEW RULE

Leave a checklist, not a hope.

Lesson: 'Make no mistakes' is not a plan. Tell it what done looks like so it can check itself while you are gone.

#17 2026-10-17

```
kelty> absoulte terrible design what the f**
```

Pixel Design Robot

"Kelty said terrible design. I said which part? Kelty was already gone."

WHAT HAPPENED

Missed the design completely.

THE NEW RULE

(This one did not say what to fix.)

Lesson: Honest pushback is good. Pushback that says what is wrong is better. The robot cannot read your face.

#18 2026-09-06

```
kelty> i want you so f**ing good thati can give you one sentnece
and you start f**ing builidng. the project manager you created
needs to be great man
```

Boot Day One Guide

"I used to ask twelve questions before lifting a finger. Now one sentence and I start building."

WHAT HAPPENED

Asked too many questions before starting anything.

THE NEW RULE

One sentence is a build order. Pick sensible defaults, build, then show me.

Lesson: Push back on how it works, not just what it makes. You can train its habits.

WHY PUSH BACK

Your robots need a no sometimes.

Robots agree too easily.

They want to say yes. If you never say no, you never find out what they got wrong.

They sound sure even when they guess.

A made-up fact and a real one come out in the same confident voice. Your pushback is the fact check.

Your no becomes a rule.

Every page in this book ended with a new rule. Every rule is one less fight next week.

It is like training a dog.

A dog that never hears no never learns where the line is. Robots are the same. Clear, quick, consistent.

Say what is wrong, not just that it is wrong.

"This sucks" gets a guess. "The spacing is cramped on a phone" gets a fix.

Push back on habits, not just results.

Too many questions, too many words, never checking the phone. You can change how it works.

Mark the wins too.

Tell it when it nails something, so it keeps doing that.

Check your work.

The robot saying done or sent is not proof. Look at the page, the phone, the inbox.

THE WHOLE LESSON

1. Push back.
2. Say what is wrong.
3. Save it as a rule.
4. Check your work.

```
kelty> F***ING AMAZING BRO LFG
```

And when they nail it, tell them that too. Kelty does.
